

The timing diagram illustrates the execution of the instruction `MOV AL, 0Ah` on an 8086 microprocessor. The horizontal axis represents time in nanoseconds (ns), ranging from 0.000 ns to 350.000 ns. The vertical axis shows various signals: clock (green), address (blue), data (purple), and status (brown).

The instruction is broken down into 8 bytes: `00 01 02 05 0a 15 2a 55`. The status signal shows the instruction cycle (00000001 to 00000008). The address signal shows the instruction address (00000000 to 00000007). The data signal shows the instruction data (00000000 to 00000007). The status signal shows the instruction cycle (00000001 to 00000008).
